The IITC Treadmill is a general purpose exerciser for mice and rats that can be expanded up to five (5) lanes. Our unit is designed to enable the operator a more precise reading in conjunction with the amount of exercise given to the animal. This digitally controlled unit has a high degree of repeatability. Test parameters are entered via the front panel keyboard. All the test results are displayed on the front panel display. The test ending results for each position are speed, test time, number of times stimulus was applied as well as distance traveled in meters. The user can select from one to five lanes at a time to be included in the test. Additional lanes up to a total of five can be added on at any time.

On the IITC 800 Treadmill we have incorporated a shock grid. The shock grid can be turned on and off at will by the user. The shock grid is located at the end of the ramp.

The equipment is supplied with a universal power supply that is built in. On all versions, the ramps can be inclined from 0 to 40 degrees in 5 degree increments. When using multiple lanes each lanes parameters and incline are controlled separately.

Two Year Warranty

CE Certified
Power: 110 & 220 VAC Switchable

Features

Mice and Rats
Expandable from 1 to 5 lanes
Textured Belt
Shock grid for each lane
Test time adjustable for each lane
Adjustable ramp speed from 1 to 18 meters per minute
Adjustable ramp inclination from 0 to 40 degrees in 5 degree increments
Individual stimulation count for each lane
USB and RS232 Standard
Printer output standard
Software for data collection (optional)
Thermal printer (optional)
